

GEOG 4/581: Final Project Worksheet—Peer Feedback

Name _____

(Whose project?)

Feedback by _____

(Whose review?)

In this activity you will review the final project proposed by one of your fellow students on their worksheet, and provide feedback that offers suggestions to clarify and develop the project. To complete this activity exchange your project worksheet with your neighbor, write your name in the space labeled “Feedback by”, and respond to each of the following prompts. Alternatively, you can together work on one person’s worksheet & feedback before the other, if that’s a more comfortable approach. Please be thoughtful and helpful.

Step I:

Read the project overview on your neighbor’s final project worksheet. In your own words and in 1-2 sentences, write what you think your neighbor’s final project is about.

Step II:

Reflect on the list of potential data layers that your neighbor has listed. Suggest two additional layers and state how those layers might be related to their project (for example, to provide context or as a potential stand-in for one of the layers that was already listed in case a data set is not available).

Step III:

Reflect on the list of potential data layers, and the analysis that your neighbor has proposed. For each function listed in the proposed analysis (up to four), state the data layer(s) that would serve as input (or as applicable state that it is unclear which data layer would serve as input)

Step IV:

Reflect on the list of potential data layers and the analysis that your neighbor has proposed. Propose an additional GIS function or tool that might be useful in their analysis (e.g., what layers might they compare? how might they filter or aggregate data?).

Return the project worksheet and this handout to your neighbor

Separate page at line and return this side to the instructor
